

1. Convert the following XML-formatted data to JSON format. Then, using AJAX, read the JSON data and display it one by one. You can navigate between the retrieved JSON data by using 'Next' and 'Previous' buttons.

```
<persons>
  <person>
    <name> John Doe </name>
    <age>25</age>
    <city> New York </city>
  </person>
  <person>
    <name> Bob Johnson </name>
    <age>35</age>
    <city> Chicago </city>
  </person>
</persons>
```

Person Details

Name: Bob Johnson

Age: 35

City: Chicago
