1. Display the following XML data in a table using Ajax, and HTML

```
<items>
 <item>
  <name>Item 1</name>
  <price>19.99</price>
  <description>Description for Item 1</description>
 </item>
 <item>
  <name>Item 2</name>
  <price>29.99</price>
  <description>Description for Item 2</description>
 </item>
</items>
```

2. Rewrite the previous code and arrange the XML data in a list.
   Note: you must use the following methods and properties: appendChild(), firstChild, nextSibling.
